main.c

Run ▶

```c
#include <stdio.h>
#include <string.h>

char input[100];
int pos = 0;

int S()
{
    if (input[pos] == 'a')
    {
        pos++;

        if (input[pos] == 'b')
        {
            pos++;
            return 1;
        }

        if (S())
        {
            if (input[pos] == 'b')
            {
                pos++;
                return 1;
            }
        }
    }
```

Output

```
Enter the input string: aabb
String is accepted by the grammar.
```
